Required Backend Changes for the "Security Events" Report Event page

- When an event is being reviewed under the My Church Tab, all fields should be editable

Required Backend Changes for the "Training" page

- When adding a PD or Doc, you should be able to add a PDF without having a Video required

Required Backend Changes for the "Reports" page

- Add a column for Church name
- Add unique church ID#

Required Backend Changes for the "Team" page

- Add unique church ID#
- This section needs to show: Unique church ID#, church name, username, Role, contact info, plan purchased, city, State, Denomination, and payment status.
- Standard roles are:
    - Team Member - A general user on the church security team. Can view incidents, receive alerts, and report new events.
    - Team Leader - The top-level role for the church. Can review, edit and approve incident reports, access analytics, and manage team activity, upload assessments and configure church settings.
    - Super Admin – Owners of the app. A platform-level administrator with access to all churches and system-wide controls.

- Make roles editable from the backend, including the ability to change roles and reset passwords.
- Ensure all columns (church name, unique church ID, roles, etc.) are filterable.
- Ensure backend can support viewing and managing active/inactive accounts and team structures per church.
